The Door Phone Multi companies, simple, modular, and evolutionary *...

This Door Phone conceived around a principal module is evolutionary to 64 keys, you can add others modules as camera and also a DECT module to make the system wireless.

The connection behind an analogue FxS of PABX makes it very attractive for small companies or Soho as well as building with several companie Its modularity allows a great flexibility in use, installation and of evolution. Call the company through a code if need be.

Programming is done through Windows software; very easy for update or any modification of settings. An external power supply makes modules backlighted, and an anti system moisture preserves the keys in time.

A function allows to forward calls to an external number, or mobile, and with a special code you will be able to make outgoing calls through the land line of the company called.

Benefits

○ **Digital keyboard for** call with preset code
○ An FxS analogue extension is enough for use
○ **Modular system** from 1 to 64 keys extension PABX
○ Works in DTMF mode and Decimal (<= 16 digits/button)
